

## Microsoft 365 accelerated risk and security assessment

### QUICKLY FIND, PRIORITIZE AND FIX POTENTIAL ISSUES

Microsoft 365 has streamlined the way organizations approach collaboration. Unfortunately, that also means data leaks, oversharing and non-compliance are only a click away. As employees leverage Microsoft 365's tools, digital collaboration can become a free-for-all, often leaving IT teams to clean up the mess.

Does your organization have a handle on what is being shared and with who? Are you managing risk properly? Can you prove it ?

We designed our Microsoft 365 Accelerated Risk and Security Assessment to help you quickly find, prioritize and fix the most high-risk issues in your 365 environment. You'll be able to put out any potential fires and manage secure collaboration going forward using the right knowledge, approach and technology.

### WITH OUR FAST-TRACKED APPROACH TO SECURING COLLABORATION IN M365 YOU WILL:

- Remediate high-risk elements
- Create and implement sensitivity labels
- Develop Microsoft 365 security settings
- Edit permissions and sharing settings
- Prioritize issues based on how your organization defines risk
- Identify instances of oversharing, anonymous links and shadow users
- Establish automated policies to trigger alerts or rollback unauthorized changes
- Aggregate access, sensitivity, and activity data across your Microsoft 365 environment

#### Deliverables

- A risk assessment report with suggested remediation paths
- Risk score over time
- Documentation on suggested sensitivity labeling and security settings

#### Outcomes

- Simplified and effective security
- Tools and techniques to address risk proactively instead of reactively
- Pre- and post- assessment security posture report
